Review Fixes — Version 1.1

The five corrections made to the backend planning documents after the review of 17 October 2026.

Document	Change log for PRD, ERD, API and STRUCTURE
Version	1.1
Date	17 October 2026
Owner	Sharaf (CEO)
Status	Applied — the four documents and their PDFs are updated
Audience	Founders, backend engineers

Contents

1. Summary

2. The five fixes in detail

- Fix 1 — Customer wallet top-up
- Fix 5 — CEO screens for the new backend modules
- Fix 6 — The 18 AI agents in the seed
- Fix 7 — Kill switch keys
- Fix 8 — Docker and Caddy persistence

3. Items checked and not changed

4. Updated files

1. Summary

الملخص بالعربي:

- اتراجعت 8 ملاحظات على الكود الحالي والملفات الخمسة. **5 منهم كانوا صح واتصلحوا**، و3 طلعوا مش موجودين في الموقع فمااتغيرش فيهم حاجة.
- **التصليحات الخمسة:**

1. **شحن محفظة العميل:** اتضاف endpoint للشحن واتعمل له تيست، واتضاف للـ PRD كمتطلب، واتضاف نوعين حركات للـ Ledger في الـ ERD.
2. **شاشات الـ CEO الجديدة:** شاشة الربط مع الشركات، وكتالوج الـ APIs، والـ Webhooks اتضافوا كمتطلب. واتصلحت الجملة اللي كانت بتمنع أي تعديل في الواجهة: الشاشات الحالية مش هتتغير، والجديدة هتتبني بنفس التصميم.
3. **الـ 18 وكيل:** بيتعملوا مع الداتا التجريبية في حالة **إيقاف**. ولما الداتا التجريبية تتقفل وقت الإطلاق، اللوحة بتبدأ فاضية.
4. **مفاتيح الإيقاف:** بقوا 9، وزاد عليهم مفتاح "الانضمام للماتشات" اللي موجود في الموقع.
5. **Docker:** Caddy بقى ليه أماكن تخزين دايمة، فشهادات HTTPS مش هتضيع لما الحاوية تتعاد.

#	Item	Verdict	Documents changed
1	Customer wallet top-up	**Fixed**	API, PRD, ERD
2	Booking add-ons (referee, ball, bibs) and split payment	Not a gap — not in the site	—
3	Fantasy head-to-head leagues	Not a gap — not in the site	—
4	Seller tiers Bronze / Silver / Gold / Platinum	Not a gap — the site uses Starter / Rising / Pro / Elite	—
5	CEO screens for integrations, API catalogue and webhooks	**Fixed**	PRD, STRUCTURE
6	The 18 AI agents in the seed	**Fixed**	PRD, ERD
7	Kill switch keys	**Fixed**	PRD, API, ERD
8	Docker and Caddy persistence	**Partly fixed** (Caddy volumes added; the `volumes:` block was already correct)	STRUCTURE

2. The five fixes in detail

Fix 1 — Customer wallet top-up

Found: the site's wallet page lets customers top up their balance (`paymentService.topUp` , quick amounts 200 / 500 / 1,000 EGP). The ERD already had "Wallet top-up" as a payment purpose (`money.Payments.Purpose`) and a receipt kind (`money.Receipts.Kind`), and the PRD mentioned top-up receipts, but **the API had no endpoint** for it and the ledger had no entry kind for it.

Changed:

Document	Where	Change
API	§2.2 My account	**Added** `POST /me/wallet/top-up` `{ amount }` — Customer + `Idempotency-Key` → 201 with a payment session; 422 outside the limits (default 50 – 10,000 EGP, from settings); 423 when payments are paused. The balance is credited **only** by the gateway's signed webhook, then a top-up receipt PDF is issued
API	§2.2 My account	**Added** `GET /me/wallet/transactions` — the customer's wallet movements (paged)
API	§11.2 Edge cases	**Added** a "Wallet top-up" row: amount 0 or over the maximum → 422; same Idempotency-Key twice → one top-up; browser says paid without a webhook → no credit; failed payment → no credit
PRD	§6.2 Wallets	**Added** FR-WAL-09: customer top-up rules — limits, webhook-only credit, receipt, what the wallet can pay for, and that wallet money is not withdrawable as cash
ERD	B85 `money.LedgerEntries.Kind`	CHECK widened from 0–12 to **0–14**, adding **Wallet top-up** (13) and **Wallet payment** (14) so every movement of the customer wallet is in the ledger

Fix 5 — CEO screens for the new backend modules

Found: the CEO system has 17 screens (overview, briefing, approvals, departments, agents, goals, budgets, calendar, reports, what-if, control, systems, audit, every page, legal…). None of them manages **integrations**, the **API catalogue** or **webhooks**, which the PRD and API require. The STRUCTURE document also said "No HTML or CSS is edited", which would forbid adding them.

Changed:

Document	Where	Change
PRD	§8.4 CEO Command Center	**Added** FR-CEO-07a: three new front-end screens — `/ceo/integrations` (registry, usage bars, secrets status, test call), `/ceo/api-catalogue` (endpoint groups, on/off) and `/ceo/webhooks` (n8n subscriptions, delivery log) — in the **same design** as the existing CEO system, in Arabic and English, linked from the CEO navigation and the Every page map

Document	Where	Change
STRUCTURE	§7 The existing site	Rule 1 rewritten: **existing screens keep their design exactly**; new screens that the backend needs are **added** in the same design (same layout, components and CSS classes), starting with the three CEO screens

Fix 6 — The 18 AI agents in the seed

Found: the front end (`js/data/org.js`) has **18 AI agents** in 8 departments, but the PRD and ERD said the agents panel starts empty, so testing on the new backend would not match the preview.

Changed:

Document	Where	Change
PRD	§9.2 FR-AI-08	With demo data **on** (`SEED__DEMODATA=true`), the seed creates the 18 agents with their duties, permissions and money limits, **paused** and without API keys. With demo data **off** (real launch), the panel starts empty and the CEO adds the real agents
ERD	§12 Seed, step 4	Org chart positions now list the human holders (CEO, admin manager, CFO, legal counsel)
ERD	§12 Seed, step 11	Demo data now includes the 18 agents: service accounts, positions under their departments, permissions, limits, status Paused, no keys

Fix 7 — Kill switch keys

Found: the site's control room has 8 switches, including **Joining games** (free-slot games). The PRD and API listed 8 switches that added **AI agents** but left out **games**.

Changed: there are now **9 switches** everywhere: `kill.bookings` , `kill.shop` , `kill.pod` , `kill.payouts` , `kill.applications` , `kill.fantasy` , `kill.community` , `kill.games` , `kill.agents` .

Document	Where	Change
PRD	§8.4 FR-CEO-09	Kill switches (9), adding joining games
API	§8 CEO → Kill switches	The 9 keys listed by name
ERD	A7 `ops.FeatureFlags.Key`	The 9 seeded kill-switch keys listed, plus the API group examples

Fix 8 — Docker and Caddy persistence

Found: the top-level `volumes:` block was already at the root of `docker-compose.yml` , so that part of the note did not apply. But the **Caddy** service had no persistent storage, so its HTTPS certificates would be lost every time the container is recreated, and it had no ports or Caddyfile.

Changed (STRUCTURE §8.2):

```
  proxy:
    image: caddy        # HTTPS certificates automatically, reverse proxy to api and n8n
    ports: ["80:80", "443:443"]
    volumes: [./Caddyfile:/etc/caddy/Caddyfile, caddy_data:/data, caddy_config:/config]   #
certificates survive restarts
volumes: { sqldata: {}, n8ndata: {}, caddy_data: {}, caddy_config: {} }
```

3. Items checked and not changed

#	Item	What was checked	Result
2	Booking add-ons and split payment	The booking checkout (`js/pages/bookingCheckout.js`) and the booking service	There is **no add-ons step**. "Referee" appears only in the free-text description of two pitches. Paying a share per player already exists as **game shares** (`POST /games/{code}/requests` , `booking.GameRequests`). If add-ons are wanted, they are a **new feature** to plan, not a gap
3	Fantasy head-to-head	All fantasy pages and data	**No head-to-head** anywhere. The site has official leagues, private groups and Fantasy Pass leagues, which match `fantasy.FantasyGroups` exactly. Head-to-head can be added later as a new feature
4	Seller tiers Bronze / Silver / Gold / Platinum	Seller pages, seller service, admin settings	"Platinum" does not exist in the site. Seller levels are **Starter / Rising / Pro / Elite** (same as the PRD and ERD). Bronze / Silver / Gold are the **customer loyalty tiers**, also already in the documents

4. Updated files

File	Status
`docs/backend/PRD.md` and `pdf/PRD.pdf`	updated (FR-WAL-09, FR-CEO-07a, FR-CEO-09, FR-AI-08)
`docs/backend/ERD.md` and `pdf/ERD.pdf`	updated (A7, B85, seed steps 4 and 11)
`docs/backend/API.md` and `pdf/API.pdf`	updated (§2.2, §8, §11.2)
`docs/backend/STRUCTURE.md` and `pdf/STRUCTURE.pdf`	updated (§7, §8.2)
`docs/backend/INTEGRATIONS.md`	unchanged
