SUPER APP

Public Data APIs — Version 1.2

The services from the public API list (public-apis, Sports & Fitness) added to the backend plan: geocoding, weather, public holidays and local phone / email validation.

Document	Change log for INTEGRATIONS, PRD, ERD, API and STRUCTURE
Version	1.2
Date	17 October 2026
Owner	Sharaf (CEO)
Status	Applied — the five documents and their PDFs are updated
Audience	Founders, backend engineers

3. To confirm before relying on them

1. Summary

الملخص بالعربي:

- من لينك الـ public-apis اللي بعته يوم 14 أكتوبر، كان **API-FOOTBALL** بس هو اللي متغطي بالكامل في الخطة. الخدمات التانية اللي وافقت عليها اتضافت دلوقتي:
  1. **تحويل العنوان لدبوس على الخريطة والعكس (Nominatim):** في شاشة إضافة الملعب، وطلب صاحب الملعب، وعناوين المصنع والبائع. البحث عن "ملاعب جنبي" مش بيكلم أي خدمة بره، بيتحسب عندنا في قاعدة البيانات.
  2. **الطقس (Open-Meteo):** توقعات الساعة المحجوزة في صفحة الملعب ووقت الحجز للملاعب المكشوفة، وتنبيه المطر أو الحر في تذكير اليوم اللي قبل الماتش، وتقويم التسويق عند البائعين. **مهم:** النسخة المجانية لغير الاستخدام التجاري، فلازم نشترك في الخطة المدفوعة قبل الإطلاق.
  3. **الأجازات الرسمية (Nager.Date أو Calendarific):** جدول جديد في قاعدة البيانات اسمه `ops.PublicHolidays` . أجازات العيد بتتحفظ "متوقعة" والأدمن يأكدها بعد الإعلان. وبتستخدم في اقتراح أسعار الأجازات لأصحاب الملاعب، وتوقع الإيراد، وتقويم البائعين.
  4. **التحقق من الموبايل والإيميل:** بمكتبة جوه السيرفر من غير أي خدمة بره، فمفيش تكلفة ومفيش بيانات شخصية بتطلع من عندنا.
- واتكتب في الخطة كمان اللي **اترفض** من نفس اللينك وسببه: المراهنات، والعملات، والـ QR، والرياضات التانية.

#	Service	Provider	Status in the plan	Priority
1	Football data	API-FOOTBALL	already covered (INTEGRATIONS §7)	Must
2	**Geocoding** (address ↔ pin)	Nominatim now; Geoapify / LocationIQ later	**added**	Must
3	**Weather**	Open-Meteo (commercial plan before launch)	**added**	Should / Later
4	**Public holidays**	Nager.Date (Egypt coverage to verify) or Calendarific	**added** + new table	Should
5	**Phone & email validation**	local library `libphonenumber-csharp` + confirmation email	**added**	Must
—	Betting, currency, QR APIs, other sports, highlight videos	—	**listed as not used**, with the reason	—

2. Changes per document

2.1 INTEGRATIONS

Where	Change
§2 Integration map	4 new rows: Geocoding, Weather, Public holidays, Phone & email validation — interface, provider, systems that use it, responsible human and AI agent
§9.2 Maps and geocoding	Rewritten: "near me" uses SQL distances (no outside call); `IGeocoder` with search and reverse; **Nominatim usage policy** (1 request/second, identifying user agent, attribution, no bulk, server cache); later paid geocoder and the questions to ask it
§9.5 Weather (new)	`IWeatherProvider`; uses (pitch page and checkout, day-before alert, seller calendar, partner insights); cached per area every 3 hours; **free API is non-commercial → commercial plan before launch**
§9.6 Public holidays (new)	`IHolidaysProvider`; stored in `ops.PublicHolidays`; Nager.Date (verify Egypt) or Calendarific; Islamic holidays saved as estimated and confirmed by an admin; uses in insights, forecast, calendar, what-if
§9.7 Phone and email validation (new)	libphonenumber-csharp to `+20…`; email proven by the confirmation link; optional disposable-domain list; no paid API
§9.8 Not used (new)	Betting/odds, currency, QR, other sports, highlight videos — with reasons
§10 Secrets	New variables: `GEO__PROVIDER`, `GEO__USER_AGENT`, `GEO__APIKEY`, `WEATHER__OPENMETEO__APIKEY`, `HOLIDAYS__PROVIDER`, `HOLIDAYS__CALENDARIFIC__APIKEY`
§12 Responsibility matrix	3 new rows: geocoding, weather plan, holidays sync and confirmations

2.2 PRD

New section 8.5 "Public data services":

ID	Requirement	Priority
FR-GEO-01	Address ↔ map pin in the pitch editor, the pitch-owner application, factory and seller addresses	Must
FR-GEO-02	"Near me" from browser position + SQL distances, no outside call per search	Must
FR-WX-01	Forecast on the pitch page and at checkout (outdoor pitches, up to 7 days)	Should
FR-WX-02	Rain / heat alert in the day-before reminder	Later
FR-WX-03	Real forecasts in the seller marketing calendar (Rising and up)	Should
FR-WX-04	Open-Meteo commercial plan before launch	Must (before launch)
FR-HOL-01	Egyptian holidays in `ops.PublicHolidays`, Islamic dates estimated then confirmed	Should

ID	Requirement	Priority
FR-HOL-02	Holidays in partner insights, seller calendar, CEO what-if, availability badge	Should
FR-VAL-01	Local phone and email validation, no outside API	Must

Plus the list of services from the same public list that are not used.

2.3 ERD

Where	Change
Creation order, Part A	New **A25** `ops.PublicHolidays` (no foreign keys)
A25 (new table)	`Country` (DF `'EG'`), `Date`, `NameEn` / `NameAr`, `Kind` (National, Religious, Observance), `IsDayOff`, `IsEstimated`, `ConfirmedById`, `ConfirmedAt`, `Source` (nagerdate, calendarific, admin); UQ (Country, Date, NameEn); index on Date
A8 `ops.Integrations.Category`	CHECK widened from 0–8 to **0–11**: Geocoding, Weather, Holidays (keys `geo.nominatim`, `weather.openmeteo`, `holidays.nagerdate`)
Totals	**25 lookup + 124 child + 13 junction = 162 tables** (was 161)
Seed step 10	Public holidays of the current and next year from the first holidays sync
SSMS checks	162 tables

2.4 API

Where	Change
§2.4 Lookups	`GET /lookups/holidays?year` — public holidays, estimated dates flagged
§3.1 Pitches	`GET /pitches/{slug}/weather?date` — hourly forecast for outdoor pitches (cached 3 h; 204 for indoor or beyond 7 days); availability grid gets a holiday badge
§3.2 Partner	`GET /geo/search?q` and `/geo/reverse?lat&lng` — Egypt only, 1 request/second per account, cached; 422 outside Egypt, 503 when the provider is busy
§7.1 Permission catalogue	New permission `content.holidays`
§7.2 Admin	`/admin/holidays` — confirm or move estimated Islamic dates, add a holiday, re-sync

2.5 STRUCTURE

Where	Change
§1.2 Tree	`Infrastructure/Integrations/Geo` (NominatimGeocoder), `Weather` (OpenMeteoClient), `Holidays` (NagerDateClient, CalendarificClient)
§4 Packages	`libphonenumber-csharp` — local phone validation

3. To confirm before relying on them

1. **Nager.Date:** that it returns Egypt's public holidays; otherwise use Calendarific.
2. **Open-Meteo:** the current price of the commercial plan, to be taken before launch.
3. **Nominatim:** volume stays low (partners adding venues); if address search grows, move to a paid geocoder.
